

User Guide

Individual statement icons for algorithms

Trivial statement

Python code (contains a ':' character)

Non-Implementable statement

Invalid statement (not all variables are used or duplicate variables)

Not affecting output

Keyboard shortcuts

CTRL + TAB	change tab (if the '...' tab is selected, the problem selector will open)
+	create new problem if problem selector is open
ENTER	select problem in problem selector (change current problem with arrows)
DEL	delete current problem in problem selector
ESC	close problem selector

How to run the algorithm

Select the first option ('Implemented') in the implementation selection box to clear the implementation. When you do so, the button below will change its text from 'Open implementation' to 'Create implementation'. Clicking that button will open the run dialog.

In the new dialog, leave checked all libraries you want the algorithm to use and uncheck those you don't want to use. Then click on the 'Run...' button to start the algorithm.
